

Catch 30% More PAD Cases

FREE Exercise Exam Upgrade

With 400CL or 500CL System Purchase

- **Detect 30% more PAD cases** vs. resting ABI alone
- **Identify early-stage disease** before severe symptoms
- **Improve accuracy** in borderline ABIs (0.9-1.0)
- **Better risk stratification** for cardiovascular events
- **Enhanced reimbursement** potential

Why Exercise Testing Matters

25-35% of PAD patients show normal resting ABIs but significant post-exercise pressure drops. These patients have real symptoms and increased cardiovascular risk. Exercise ABI testing unmask "hidden" cases for earlier intervention and better outcomes.

Go Green, Save Green

FREE Recharge Base

With Rechargeable DigiDop Purchase

- **Save \$500+ annually** on disposable batteries
- **Eliminate hundreds** of single-use batteries
- **Always ready** – never worry about dead batteries
- **Lower total cost** of ownership

Smart Investment

Average clinics spend \$400-900 annually on batteries per Doppler. Rechargeable DigiDops pay for themselves in year one while reducing your carbon footprint.
